Abstract of WO9512331

A clip for use when colouring discrete hair strands comprises two elongate gripper members (1, 2) joined by a hinge (3) and including at their free ends means (5) for selectively connecting one gripper member to the other, and a strip of flexible impervious material (9) carried by each gripper member. The gripper members are preferably produced from a plastics material, the hinge comprising a resilient plastics strip joining one gripper member to the other.

Abstract of GB2242357

A device for use in hair treatment (e.g. highlighting) comprises a clip which may be conveniently manufactured in plastic and comprises two flat plates (1 and 2) of rectangular shape being joined by an integral hinge (3), for example of flexible plastic. The plates may be closed together by flexure about the hinge (3) and fastened in the closed position by means of a latch (4). The inner faces of each plate have an applied strip of a retentive or absorbent resilient material such as rubber or plastic foam or plastic wool (5). These absorbent strips may be secured for example by projecting spikes (6) which penetrate the strip, or may be permanently or releasably bonded to the surfaces of the plates. Tinting cream may be applied to one or both of the absorbent strips and selected tufts of hair are each held in a cream coated clip; the clips are easily placed and fastened using one hand only, allowing the other hand to keep a secure grip on the tuft of hair.

Abstract of GB590971

590,971. Combs. NOYES, C. R. FINCH-. April 26, 1945, No. 10522. [Class 131] A ..device for holding a pad of absorbent material 3 in contact with each side, and intermediate the tips and roots of, the teeth of the comb 1, comprises an elongated spring clip 2 with perforations 4 whereby the absorbent material may be impregnated with hair dressing. The device may be impregnated with hair dressing or may be formed of two parts hinged longitudinally and provided with a locking device. The pad holding device or the comb handle may include a container for the hair dressing.

Abstract of US5156172

A fastener of a hair-treating device is first slid into position adjacent a human scalp and, thereupon, is affirmatively locked on a bundle of hair in a non-slip manner. A shield attached to the fastener is opened to receive a different bundle of hair for application of a treating agent, and thereupon closed to prevent the treating agent from seeping to the balance of hair on the scalp. An independently operated bleed-guard further resists treating agent seepage.

Report a data error here

Abstract of US4108184

Clamp devices for use in selectively altering hair color-color, especially advantageous for use with off-the-scalp type bleach materials, comprising two bars hinged at one end to each other with a latch at the other end for removably holding them in the closed position with one face of one bar tightly against the opposed face of the other bar. The adjacent faces of each are aligned so that they may be placed close to the scalp with tresses of hair between the opposed faces, one of which may have spaced recesses for the tresses. A shield, e.g., a sheet of plastic, preferably is secured along one edge to one of the bars which extends away from said aligned edges far enough to underlie the tresses held in the clamp and protect the underlying bar from hair color altering liquids applied to the clamped tresses. For maintenance treatments where hair color altering materials should be applied to new growth only, a second clamp may be provided to be applied to the clamped tresses at the end of the new growth and it may have any desired structure, e.g., a hollow bar with an elastic band secured at one end to one end of the hollow bar and the other end removably securable to the other end of the hollow bar.

Abstract of GB2276818

To enable the roots of a head of a head of hair to be frequently permed, and at the same time fully protect and existing perm by insulating the already permed portion a plastic type clip (shield). 9 is provided having a cylindrical body and two skirt portions 10, 11, which are more deflectable than the body portion (eg. they are thinner or of different material). The clip fits an existing perm roller and covers the already permed hair wound on it.
